Six Strategies for Improving Your Therapeutic Engagement Skills

**SIX KEY STRATEGIES FOR THERAPEUTIC ENGAGEMENT**

David S. Prescott, LICSW
Welcome!

**TAKE HOME MESSAGES**
- What you do matters
- What you do works
- Follow the research
- Be data driven
- Beware of false advertising
- Always keep the big picture in mind

**INTRODUCTORY REMARKS**

**WHAT’S OUR GOAL?**
- Stopping the behavior?
- Justice for the victim?
- Preventing re-offense?

**WHAT WORKS?**
- Do we want them to re-offend or not?
- What can we do?
- Who should we be?
- Is that enough?

**ASK YOURSELF**
- What’s the best session you’ve done in the past year?
- What made it so effective?
- What gets in the way of your doing that all the time?
Six Strategies for Improving Your Therapeutic Engagement Skills

MY MOTIVATION

Problems:

• Disrespect by many professionals of the earliest phases of treatment
• Implicit assumptions of many professionals
  • “treatment is a privilege” vs. change is a right
  • “I only accept you if you accept my timetable for change.”

BEFORE YOU PAINT YOUR HOME...

• This is the first step to change
• This is treatment

Before painting your home...

This is awakening motivation
This is maintaining motivation

REALITY

• We need to ...
  • build willing partners in change
  • build treatment completers
  • build responsibility

EFFECTIVE PROGRAMS

RESPONSIVITY principle

• Effective programs are those which are responsive to client characteristics
  • cognitive abilities
  • maturity
  • motivation
  • mode of intervention
  • scheduling concerns
  • neurological impact of trauma

RELATIONSHIP PROBLEMS

LEARNING DIFFICULTIES
Six Strategies for Improving Your Therapeutic Engagement Skills

**HYPERACTIVITY**

**COMMUNICATION DIFFICULTIES**

**PARADOXICAL COMMUNICATION**
- You need to be more motivated to change.
- Treatment holds the promise of a “good life”.
- It is our job to point out your thinking errors; however, it is not acceptable for you to observe when we are using thinking errors.
- We expect you to demonstrate meaningful and consistent behavioral change within a highly controlled environment.
- You need to participate fully in treatment regimens that we professionals cannot agree on ourselves.

**COGNITIVE RIGIDITY**

**AMBIVALENCE**
- I want to work with you, and I don’t want to sacrifice myself
- I want to change, and I want to be respected
- I want to be in treatment, and I don’t want to be in a one-down position
- I want to look at myself, and I don’t want to feel less of a man
- etc. etc. etc. etc. etc.

Marshall, 2005
Six Strategies for Improving Your Therapeutic Engagement Skills

MARSHALL, 2005
- Warm
- Empathic
- Rewarding
- Directive

Problem: Many people think they have these qualities, but don’t

Telling “The Hard Truth”
- Feedback Sandwich
  - Affirm => Feedback => Affirm
- Elicit => Provide => Elicit
  - Ask permission to give feedback, give the feedback, then elicit the client’s thoughts about your feedback
- Motivational approaches are not necessarily warm and fuzzy

Embrace your biases!

Strategy #1

Walfish et al., 2012
- No differences in how clinicians rated their overall skill level and effectiveness levels between disciplines.
- On average, clinicians rated themselves at the 80th percentile
- Less than 4% considered themselves average
- No one rated themselves below average
- Only 8% rated themselves lower than the 75th percentile
- 25% rated their performance at the 90th% or higher compared to their peers

DIRTY LITTLE SECRETS
- ... from outcome studies
  - More difference between the best and the worst therapists within any treatment method, than there is between treatment methods
  - Some therapists are better than others
  - Hiatt & Hargrave (1995) asked therapists to estimate their effectiveness in a treatment study
    - The LEAST effective therapists rated themselves as being among the most helpful

SELF-ASSESSMENT BIAS

David Prescott, LICSW
ARE YOU EXPERIENCED?

- Paul Clement (2008) analyzed his 26-year career as a therapist
- 683 cases, 84 diagnoses
- “I had expected to find that I had gotten better and better over the years...but my data failed to suggest any...change in my therapeutic effectiveness across the 26 years in question.”
- Results at 40 years were worse

JUST ONE GUY?

- 581 therapists
- 6,146 real world clients
- Average sessions = 10
- 46% depression, 30% adjustment disorder, 11% anxiety, plus other diagnoses
- Who got the best outcomes?
  - Training makes no difference
  - Profession makes no difference
  - EXPERIENCE makes no difference
  - Diagnosis makes no difference

PROFICIENCY VERSUS EXCELLENCE

- Proficiency in most fields can be obtained within 6 months
- The same goes for therapy
  - Most people are at their most effective 1 year after licensing/registration
  - Confidence improves throughout career
  - Competence does not
  - Particularly important consideration in risk assessment

ALLEGIANCE BIAS

- Professionals’ allegiance to their models and techniques can be as important and the models and techniques they use.
- Placebo effects
- Example: good lives model versus relapse prevention

ADVERSARIAL BIAS

- Boccaccini, Murrie, et al.
  - Scores on measures such as the PCL-R and Static-99r can vary in response to who is paying for the evaluation.
  - “You gotta dance with the one that brung ya”

OTHER CLASSIC BIASES

- Confirmation Bias
- Fundamental Attribution Error
TAKE-HOME SKILL

Accept and embrace the fact that you have these biases.
Then let them go...
And get on to the work of connecting with your client
You can always return to these biases later!

THERAPEUTIC FACTORS

• AKA “Common Factors”
• Factors common to all bona fide therapies

FACTORS INFLUENCING OUTCOME
VARIANCE (GRATITUDE TO JEB BROWN)

- Unexplained 74% (external stressors, health condition, social supports, etc.)
- Acuity (intake score) 18%
- Diagnosis, age & sex 2%
- Clinician 6%
- Treatment method 1%

IMPLICATIONS FOR PROFESSIONAL DEVELOPMENT
- Study your population deeply
- Study each client deeply
- Expertise at engaging with clients involves moving from the micro to the macro as well as vice versa
- Use models and techniques in the service of developing yourself professionally

GOALS
- Avoidance goals:
  - Associated with negative affect, psychological distress, impairment in psychological functioning, impairment of self-regulatory capacity in situations of stress
  - Require considerable cognitive resources to attain and maintain
- Approach goals:
  - Motivate individual to achieve desired states/outcomes
  - More easily attained than avoidance goals
  - Associated with positive affect, reduced cognitive load, less deterioration in self-regulatory ability, lower levels of psychological distress

USE APPROACH GOALS

APPROACH/AVOIDANCE
- I don’t want any more victims.
- I don’t want to use drugs or alcohol to excess any more.
- I don’t want to gamble any more.
- I have been ordered to stay away from the victim of my crime.
- I don’t want to look stupid.
- I want activities in my life that I’m good at (like hobbies).

Six Strategies for Improving Your Therapeutic Engagement Skills

TREATMENT PLANS
- Mr. X will reduce his risk
- Mr. X will take all his medications
- Mr. X will work on his sexual preoccupation
- Mr. X will pass his polygraph
- Mr. Y will manage all risks successfully
- Mr. Y will work with his psychiatrist to determine the most effective treatment
- Mr. Y will develop healthy sexual outlets
- Mr. Y will be honest with himself and others

FROM MY CASELOAD
- Mr. X will demonstrate to others that he has changed
- Mr. X will become the person he wants to be
- Mr. X will improve his relationships with others
- Mr. X will work to prevent further allegations

BE TRAUMA-INFORMED
Strategy #4
And I mean really trauma-informed

WHAT IS TRAUMA?
- PTSD
- Complex PTSD
- DESNOS
- Complex trauma
- Developmental Trauma Disorder

WHAT IS TRAUMA?
- Trauma is the desperate hope that the past was somehow different.
  - -- Jan Hindman

WHAT IS TRAUMA?
- APA:
  - Trauma is an emotional response to a terrible event like an accident, rape or natural disaster. Immediately after the event, shock and denial are typical. Longer term reactions include unpredictable emotions, flashbacks, strained relationships and even physical symptoms like headaches or nausea. While these feelings are normal, some people have difficulty moving on with their lives. Psychologists can help these individuals find constructive ways of managing their emotions.
Six Strategies for Improving Your Therapeutic Engagement Skills

ABSENCE OF CURIOSITY

KEY THEME IN WORKBOOK

- Just notice
- See what happens next
  - Not just mindful...
  - Investigating each experience

TRAUMA

- Relational issues
- Somatic challenges

WHAT IS TRAUMA?

The goal of (trauma) treatment is to help people live in the present, without feeling or behaving according to irrelevant demands belonging to the past.

- Bessel van der Kolk

CASE EXAMPLE

- EBT roll-out
- JCCO directed client into treatment
- Client reluctant to attend
- Harm
BENISH, IMEL, & WAMPOLD, 2008

• Treatment for PTSD is effective
• “Bona fide psychotherapies produce equivalent benefits for patients with PTSD”
• Much controversy

ULTIMATELY

No intervention that takes power away from the survivor can possibly foster her recovery, no matter how much it appears to be in (his or) her immediate best interest.

-- Judith Herman, M.D.

• Reframe: Interventions that empower survivors foster recovery

POST-TRAUMATIC STRESS DISORDER

• Traumatic event including
  - Actual or threat of death or serious injury
  - Threat to physical integrity
  - Response of intense fear, helplessness, horror
• Persistent re-experiencing of events
• Persistent avoidance of associated stimuli & numbing of responsiveness
• Persistent symptoms of increased arousal
• Duration >1 month, significant disturbance in functioning

SEPTEMBER 11

• Critical Incident Stress Debriefing
• Some treatments cause harm
• Lilienfeld (2007)

POST-TRAUMATIC STRESS DISORDER

• Re-experiencing distress
  - Recollections, images, thoughts, perceptions
  - Dreams
  - Flashbacks, illusions, hallucinations
• Avoidance of related stimuli
  - Thoughts, feelings, conversations
  - Activities, places or people
**Six Strategies for Improving Your Therapeutic Engagement Skills**

**POST-TRAUMATIC STRESS DISORDER**
- **Numbing of general responsiveness**
  - Inability to recall important aspects of event
  - Diminished interest/participation in activities
  - Detachment/estrangement from others
  - Restricted range of emotions (e.g., love)
  - Sense of foreshortened future
- **Arousal symptoms**
  - Insomnia, anger, hypervigilance, difficulty concentrating, exaggerated startle response

**POST-TRAUMATIC STRESS DISORDER**
- **Events**
  - Military combat
  - Violent personal assault (physical, sexual, mugging)
  - Kidnapping, terrorism, torture, incarceration, disasters, auto accidents, terminal diagnosis
  - Witnessing fatal accident, body parts
- **Typically worse when event is of human design**
- **Typically worse when stressor is repeated, chronic**

**IMPORTANT**
- Not all trauma results in PTSD
- Trauma can have a devastating effect on life outside of PTSD

**PREPARE MORE THAN YOU THINK YOU SHOULD**

**SPECIFIC STEPS**
1. Get into the mindset that you are creating new mindsets
2. 10,000 foot rule
3. Relax your body
4. Lower your shoulders
5. Slow your breathing
6. Reject all distractions
7. Spend 1st 20% of every interaction engaging
8. It’s hard to argue with a relaxed person

**PRACTICE SPECIFIC MOTIVATIONAL TECHNIQUES**

David Prescott, LICSW
2013 PRACTITIONER’S DEFINITION

Motivational interviewing is a person-centered counseling style for addressing the common problem of ambivalence about change.

2013 TECHNICAL DEFINITION

Motivational interviewing is a collaborative, goal-oriented style of communication with particular attention to the language of change. It is designed to strengthen personal motivation for and commitment to a specific goal by eliciting and exploring the person’s own reasons for change within an atmosphere of acceptance and compassion.

THE SPIRIT OF MOTIVATIONAL INTERVIEWING

- Partnership
- Acceptance
- Compassion
- Evocation

FOUR PROCESSES

- Engaging
- Focusing
- Evoking
- Planning

THESE PROCESSES ARE...

- Somewhat linear
  - E.g., engagement comes first
- And also recursive
  - Engaging happens throughout MI
  - Focusing is not a one-time event;
  - Real treatment involves re-focusing
  - *testing the water* on planning helps

TALK

There is no such thing as “resistance”

There is discord and sustain talk

“I’m not gonna; you can’t make me”
**CHANGE TALK**
- Desire "I want to..."
- Ability "I can..."
- Reason "There are good reasons to..."
- Need "I need to"

**RESPONDING TO CHANGE TALK**
- When you hear change talk, don’t just stand there!
- Elaborate (tell me more)
- Affirm
- Reflect
- Summarize

**GETTING MOVING: OARS**
- Open questions
- Affirmations
- Reflections
- Summaries

**REFLECTIVE LISTENING**
- Simple Reflection
  - Exact words
  - Closely related words
- Complex Reflection
  - Continuing the paragraph
  - Reflecting emotion

**USE ROUTINE OUTCOME MONITORING**

Strategy #7

---

**Outcome Rating Scale (ORS)**

Looking back over the last week, including today, help us understand how you have been feeling by rating how well you have been doing in the following areas of your life, where marks to the left represent low levels and marks to the right indicate high levels. If you are filling out this form for someone else, please fill it out according to how you think he or she is doing.

- **Individually** (Personal well-being)
- **Interpersonally** (Family, close relationships)
- **Socially** (Work, school, friendships)
- **Overall** (General sense of well-being)
**Six Strategies for Improving Your Therapeutic Engagement Skills**

**SESSION RATING SCALE (SRS V.3.0)**

Please rate today's session by placing a mark on the line nearest to the descriptions that best fit your experience.

<table>
<thead>
<tr>
<th>Relationship</th>
<th>I did not feel heard, understood, and respected.</th>
